### projectKEEPERS LLC Launches Online Solution that Simplifies Grant and Project Management

**ANCHORAGE, ALASKA.** — October 26, 2012 projectKEEPERS LLC today announced the launch of its cloud-based SaaS (Software-as-a-Service) technology that will help Tribal agencies, non-profits, and business enterprises improve grant administration and project management proficiency. The online system will be accessible from desktop computers and mobile devices such as tablets, smart phones, and laptops.

As grant requirements have increasingly become more complex, new expectations for management have emerged that clash with allotted time for implementation. The projectKEEPERS' online service will empower project administrators and organizations with knowledge and capabilities to respond to a rapidly evolving and complex funding landscape.

ProjectKEEPERS LLC has developed a collaborative partnership with Microware, Inc. for technical support. The partnership complements existing services from both companies and is expected to yield job growth in its first two years of existence. ProjectKEEPERS LLC and Microware Inc. will each maintain a strong presence in their respective industries; Joan Herrmann will serve as the projectKEEPERS LLC Chief Executive Officer and Ron Perry will maintain his active position as President of Microware, Inc. Both companies are headquartered in Anchorage, AK.

#### **About projectKEEPERS LLC**

projectKEEPERS LLC is a grant consulting company that provides grant project management, grant writing, and training services. More than 20 years of services have resulted in enduring relationships with its clients based on respect and reliability. The company's approach of using cross-cultural relevance in training and support services gains positive results to challenges that face grantees and project managers everywhere.

#### **About Microware Inc.**

Microware has been providing information technology services since 1989, including custom application development, WAN/ LAN services, VOIP, Website development, installation and repair, training services and network security. Microware is a graduated 8(a) Alaska Native owned company and a Small Disadvantaged Business (SDB). The company focuses on building trust and long lasting relationships with its existing and potential clients. Microware's team brings personality, reputation, integrity and technical excellence to the production and delivery of information technology, communication and workspace services.
